

Faith2Green applauds Congressman Ted Lieu's Climate Solutions Act of 2015. Protecting the planet from human activities that cause global warming is a values issue that fulfills all of our faith's teachings asking humans to be good stewards of the earth.

Nearly all States have developed their own climate plans. Most of the United States is moving on its own because we are so slow to act as a Nation. Most States have enacted standards to require that electricity be generated with renewable fuels rather than fossil fuels. Cities are not waiting for us either. Cities are moving.

Yet, without concerted Federal action, the United States will not be able to achieve real, significant greenhouse gas reductions. If Members of the U.S. Congress agree with the science, if they agree with virtually all of the literature to date, if they look out and study the weather and they see the changes, if they see the fluctuation in weather patterns, the aberrant behavior of weather, they will come to the conclusion that global warming is real. It is real, and we now have a bill to do something positive about it, as this plan provides a much-needed road-map to meet our national renewable energy and GHG reduction goals

We also support the Climate Solutions Act of 2015 because it is premised on the notion that environmental and economic goals are not mutually exclusive, but rather, they complement each other.

This effort reflects Faith2Green's commitment that we all have "a sacred responsibility to steward the Earth and not a license to abuse the creation of which we are a part."

We applaud Congressman Ted Lieu and his team, for this innovative legislation, and its rightful focus on lifting up our nation through moral and righteous policies that tie sustainability to the economy and science.

With Peace,

Lee H. Wallach

President

The mission of Faith2Green is to instill a commitment to environmental protection rooted in our shared moral values.
